

## Addison Blueprints

The giant sculpture is a tribute to the planning, dreaming and building that went in to creating the Town of Addison. The sculpture represents blueprints, rolled up and blooming, literally coming to life with collaged symbols of historical interest. Look for details and explanations on panels on the southwest corner of Addison Circle and Quorum Dr.

Designed by Mel Chin, the sculpture cost \$2 million, weighs 410,000 pounds, and took over a year to build with Big D Metalworks doing most of the work. The poles had to be bent in Houston, however, and the tapers on the end were built by a ship mast building company in New Jersey. All in all, it was a big vision and an incredible engineering feat to create and install.
